

Telles Receives FDA Clearance for Mirel™ F1005 and F1006 Injection Molding Bioplastic Materials for use in Food Contact Applications

CAMBRIDGE, Mass., May 11, 2010 – Metabolix, Inc. (NASDAQ: MBLX) and Archer Daniels Midland Company today announced that Telles received U.S. Food and Drug Administration (FDA) clearance for the formulated products Mirel™ F1005 and F1006, food contact injection molding grades for use in food contact applications. The FDA accepted the submitted Telles notification, and clearance is effective as of May 11, 2010.

Mirel F1005 and F1006 grades are now cleared for use in non-alcoholic food contact applications. The conditions of use range from frozen food storage to boiling water up to 212°F, including microwave reheating. Mirel is suitable for a wide range of injection molded food service and packaging applications including caps and closures, and disposable items such as forks, spoons, knives, tubs, trays, and hot cup lids. The clearance also includes products such as house-wares, cosmetics and medical packaging.

“With the Clinton plant now in operation, and this FDA clearance, we now can move forward with brand owners’ requests to use Mirel in their injection molded food packaging applications,” stated Richard Eno, CEO of Metabolix. “These applications, which currently consume billions of pounds of petroleum-based polymers per year, offer considerable opportunity for growth of our biobased, biodegradable polymer, Mirel.”

Telles engaged Intertek to help develop the full dossier for this food notification submission. Intertek is a leading provider of quality and safety solutions serving a wide range of industries around the world.

About Mirel Bioplastics

Mirel is a family of bioplastic materials that have the physical properties of petroleum-based resins, but are biobased and biodegradable in natural soil and water environments, in home composting systems, and in industrial composting facilities where such facilities are available. The rate and extent of Mirel’s biodegradability will depend on the size and shape of the articles made from it. However, like nearly all bioplastics and organic matter, Mirel is not designed to biodegrade in conventional landfills.

Commercial grades of Mirel are available for injection molding, cast sheet, thermoforming, and film applications. Telles is the joint venture between Metabolix and Archer Daniels Midland Company that is commercializing Mirel bioplastics. The first commercial-scale plant is located adjacent to the ADM wet corn mill in Clinton, Iowa. For more information please visit [.mirelplastics.com](http://mirelplastics.com).

About Metabolix

Founded in 1992, Metabolix, Inc. is an innovation-driven bioscience company focused on providing sustainable solutions for the world’s needs for plastics, chemicals and energy. The

Company is taking a systems approach, from gene to end product, integrating sophisticated biotechnology with advanced industrial practice. Metabolix is now developing and commercializing Mirel™, a family of high performance bioplastics which are biobased and biodegradable alternatives to many petroleum based plastics. Metabolix is also developing a proprietary platform technology for co-producing plastics, chemicals and energy, from crops such as switchgrass, oilseeds and sugarcane.
